**Some other best practices needed in P&A workstream (Dated: 03 Jul 2020 ):**

- 1. P&A should follow Test Driven Development approach**
  - a. Unit Tests are written first and then development starts
- 2. P&A should follow true Behavioral Driven Development approach** (and not just BDD tests)
  - a. The story is developed based on feature requirements.
    - i. BA writes the acceptance criteria in the form of Feature File
    - ii. QE integrates feature file in jenkins pipeline
    - iii. The developer develops the functionality ensuring feature file execution passes
  - b. End-to-End story Go-live responsibility should lie with Developer and QE should act as an Enabler and not a Tester (least hand-offs approach)
- 3. Components Tests should be moved from Springboot to Gherkin/Cucumber format** (Currently only BDD integration tests are in CucumberGherkin format)
- 4. More focus & coverage should be given on Unit & Component tests rather BDD integration tests** (Test Pyramid approach is missing ATM)
- 5. Tools Like X-Ray can be integrated for Story Test coverage** (Already planned for P1.14)
- 6. Webhooks implementation for each pipeline deployment** - Currently execution happens via jenkins job click only
- 7. Parallel NFR Test stage integration in deployments pipelines** - Currently Jenkins doesn't support much load
- 8. Environment on-Demand** - Currently feature branch deployments is a limitation
- 9. Reporting: Proper Speedy integration & regular monitoring of all quality gates** - Currently no latest data is present in Speedy
